Fully Dressed Use Cases

Use case UC-01: Book Appointment
Primary Actor: Patient/Administrative Staff
Stakeholders and interests: Patient: wants easy booking, Administrative Staff: wants quick appointment management and booking
Preconditions: Patient is registered in system, healthcare professional's schedule is recorded too
Success Guarantee (Postconditions): Appointment is booked and saved, appointment is associated with patient and healthcare professional
Main success scenario (or basic flow):
The patient or administrative staff requests an appointment
The system finds the patient information
The patient or administrative staff chooses a healthcare professional and service
The system checks the schedule of the healthcare professional.It then checks if referral is needed
The system shows the date and time to book
The patient or staff selects the preferred date and time
The system books and saves the appointment
Extensions (or alternative flows):
If referral is missing, indicate error
If healthcare professional is unavailable at requested time,select another time or healthcare professional
Special Requirements: Patient privacy, role-based access
Technology and Data Variations List: Patient identified by RAMQ or private insurance number
Open Issues:
Can a patient book an appointment more than once a day?
Does a referral have any expiration date?

Use case UC-07: Register Payment
Primary Actor: Administrative Staff
Stakeholders and Interests: Patient:wants payments recorded correctly, Administrative Staff: wants payments registered accurately, Clinic: wants to keep accurate payment records
Preconditions: Patient is registered in system,invoice has already been created for service
Success Guarantee (Postconditions): Payment is registered and recorded
Main success scenario (or basic flow):
The administrative staff searches for the patient's information
The system shows the patient's invoice for the uninsured service
The administrative staff picks the invoice and enters the payment details

The system registers and saves the payment, then displays a confirmation
Extensions (or alternative flows):
If patient invoice is not found, show error
If some payment information is missing or invalid,ask for correct details
Special Requirements: Role-based access to payment information
Technology and Data Variations List: Payment can be made directly or through private insurance
Open issues: Is Visa accepted as a payment method? Can a patient split invoice into multiple payments? Is a refund allowed after the payment is completed?

Use case UC-08: Issue Prescription
Primary Actor: Healthcare Professional
Stakeholders and Interests: Healthcare Professional:wants to prescribe medications easily, Patient: wants to get the appropriate prescription.
Preconditions: Patient information is recorded.The consultation has already happened
Success Guarantee (Postconditions): Prescription is created and saved
Main success scenario (or basic flow):
The healthcare professional opens the patient's clinical record
The system shows the information of patient and consultations
The healthcare professional selects a consultation
The healthcare professional creates a prescription draft then selects one or more than one medication for patient
The healthcare professional enters the details of prescription and issues it
The System records the prescription and shows confirmation
Extensions (or alternative flows):
If patient record can't be found, show error
If prescription information is incomplete, ask for missing details
Special Requirements: Restricted access to clinical information
Technology and Data Variation List: Prescription has one or more medications
Open issues: Can a prescription be changed after being issued? Can it be renewed through the system?
